TASK ROULETTE

By; Balmonte, Angel
Herbito, Rizaan

Project Objectives

- To help indecisive users with deciding which tasks to do first
- Allow users to set deadlines and track progress
- For them to finish it slowly but surely so that their work won't pile up
- The project aims to improve task completion, reduce the stress of decision-making, and make prioritizing tasks more fun and effortless.

FEATURES

- Add, edit and delete task and due date
- Oraganizes the tasks under a specific category (maximum of 5 categories)
- Shuffles the tasks
- Crosses out the finished tasks and marks the task red if overdue
- Displays how many days a task is overdue
- Organizes the tasks in a calendar
- Progress tracker

METHODOLOGY

PROJECT OVERVIEW

- To-do Roulette is a task manger that helps users organize, track and choose tasks.
- Main Sections:
  Categories
  Calendar
  Progress tracking
- The categories section was implemented first as it served as thee backbone since all tasks and deadlines are stored here

METHODOLOGY

CORE FEATURES

- Task Category Section
  - –Tasks are grouped into categories
  - –Implemented using dictionaries
  - –Each category stores its own list of tasks
- Task Management
  - –Users can:
    - Add tasks with deadlines
    - Edit task name and deadline
    - Delete tasks
- Progress
  - – Displays the finished tasks

- Calendar:

  Task Completion System
  - –Tasks can be marked as done
  - –Completed tasks are crossed out
  - –Done tasks are excluded from the roulette

  Overdue Task Detection
  - –If a task is overdue and not yet completed:
    - it is displayed in red
    - the number of days overdue is shown
  - –Completed tasks are crossed out
  - –Done tasks are excluded from the roulette

METHODOLOGY

TECHNOLOGIES & SYSTEM INTERACTION & DESIGN

- Technologies Used
  - -Python
    - -datetime (handles deadlines)
    - -random (task selection)
  - -Flask for routing and backend
  - -HTML for interface design
- System Interaction
  - -User inputs data through the interface
  - -The backend processes and stores the data
  - -The system updates and displays results
- Key Design Decisions
  - -Calendar for better deadline visualization
- Ethical Considerations
  - -No personal data collected
  - -Focused only on productivity
